# Assistants migration guide

The Assistants API was sunset on August 26, 2026.

Copy Page

> ⚠ The Assistants API was officially sunset on August 26, 2026, and is no longer available. Use the Responses API for new integrations.

Thank you to everyone who used the Assistants API. We appreciate everything you built and the feedback you shared along the way.

Use this guide to migrate your integration to the Responses API.

Responses are simpler—send input items and get output items back. With the Responses API, you also get better performance and new features like web search, MCP, and computer use. This change also lets you manage conversations instead of passing back `previous_response_id`.

## What's changed?

| Before | Now | Why? |
|---|---|---|
| `Assistants` | `Prompts` | Prompts hold configuration (model, tools, instructions) and are easier to version and update |
| `Threads` | `Conversations` | Streams of items instead of just messages |
| `Runs` | `Responses` | Responses send input items or use a conversation object and receive output items; tool call loops are explicitly managed |
| `Run steps` | `Items` | Generalized objects—can be messages, tool calls, outputs, and more |

## From assistants to prompts

Assistants were persistent API objects that bundled model choice, instructions, and tool declarations—created and managed entirely through the API. Their replacement
